Your Guardian unit has been upgraded!

Your Guardian unit has been fitted with a new light bar that will glow orange when you start to feel tired.

Scan the QR code to watch Murph explain this feature and how it will keep you safer on the road.

AutoSense DRIVING SAFETY | **seeing** machines

Guardian sees fatigue coming, before you do!

Your Guardian unit now spots early signs of drowsiness, alerting you before you reach a dangerous micro-sleep state. The new light bar feature helps you take action and stay safe.

If you do fall asleep, Guardian will still activate sound, visual, and vibration alerts. But with this early warning system, the aim is to prevent you from reaching that risky level of fatigue.

Talk to your manager for more information
